Ticketing software for transport

Touch4 creates touch screen transport ticketing software to meet the needs of providers of all sizes, ensuring that routine enquiries and ticketing transactions are handled with minimal fuss, and letting you get on with the business of taking people where they want to go.

By concentrating on developing fast-responding and reliable software, along with user-friendly and instinctive interfaces, Touch4 creates ticketing systems which will keep lines moving — resulting in happier customers, more revenue for you and lower staffing costs.

Ticketing Solutions

Our easy-to-use ticketing kiosk software allows customers to quickly explore different routes and ticket availability, and then purchase their selections on the spot. The quick transaction time and convenience offered by these systems will achieve significant benefits for both you and your customers — ensuring a rapid ROI.

The Stagecoach ticketing solution

In 2010, Stagecoach approached Touch4 to provide a self-service kiosk solution to be installed into Victoria Coach Station in London. The kiosk would allow passengers to look up routes running from Victoria and then to purchase tickets.

The full payment kiosks themselves utilised a 19" touch screen and included card payment devices (chip & pin pads) along with receipt printers for producing customer tickets and card receipts. The ticketing solution also had to fully integrate with Stagecoach's existing travel system to check for the availability of bus seats prior to purchase, and then to update the system on tickets sold.

Following on from the resounding success of the initial scheme, Touch4 has rolled out transport ticketing solutions for megabus/Stagecoach at the Shudehill Interchange in Manchester. We have also engaged on other integration projects with Stagecoach for a proposed new seat reservation solution, allowing passengers to upgrade to sleeper seats, window seats or seats with greater leg room.
